

COLLECTION

Stack Panel original is our stock-item. As from 70 m² we, Premium Panels, are able to lacker the panels in any requested color.

STACK PANEL ORIGINAL

STACK PANEL WHITE WASH

STACK PANEL WENGE

STACK PANEL PLAIN COLOR WHITE*

* Other plain colors available on request

INSTALLATION

Step 1

Stack Panel original panel must be installed onto a clean, solid surface, e.g. brick, rendered brick, fibrous cement sheeting or plywood. It can also be installed onto Gyproc/Knauff if it has been secured correctly and is not above 3 metres in height.

Step 2

Adhesive must be applied to the back of each panel according to our glueing instructions and then placed on the wall. Each panel when laid should be tapped into place so the adhesives take hold.

Step 3

If proceeding with a horizontal application, set the first layer of panels with a level sitting on 5mm packers to allow for an expansion gap.

Step 4

Start to lay the panels in a staggered brick like form leaving a 8mm gap at the top of the wall for an expansion gap.

Recommendations

All panels should be cut on a drop saw for timber and ripped down with a circular saw. External corners should be mitered using the same panel to match or using the half in half system where the bottom half of the panel gets cut out and the top half of the other panel gets cut out to form an external corner. All safety equipment should be used including ear muffs, eye protection and a dust mask.

Glueing instructions: Available on request.

Ecology
Sustainable and transparent production methods to keep a clear conscience

PREMIUM PANELS

Philosophy

In this modern world, people are becoming more conscientious about their environment and value the benefits of doing positive things for the future. This is reflected in what is expected of the spaces they are living in: an environment with 'touchable' materials, which inspire warmth & comfort, offer solutions to individual or group needs and take care about the environment and health.

At the same time, just because you want your space to be efficient, sustainable, healthy, and comfortable, does not mean that it cannot be innovative and beautiful.

It goes without saying; if you want to create a truly stylish atmosphere, putting the right decoration on your walls will make all the difference.

We found there is a need to find eco-conscious design-products to higher levels of quality, luxury, and sophistication: High class products with a message!

Premium Panels, your choice

We, Premium Panels, have more than 20 years experience in interior projects & design and are constantly developing our portfolio with high class interior design products. Our products are all handmade and recognized as eco-friendly.

As projects today require both affordable products which are easy to use and products which can satisfy the individual, we have chosen to offer products which are a blend of both high class aesthetic and technical elements.

We believe that our collections of Stack Panel -, Stonini Profilestone -, and Luxface Ecoresin will enable an architect or interior designer to create a favorable technical solution and also reply to the individual wishes of the end customer.

Premium Panels, our mission

Delivering a project in these days is all about connecting companies, products, and people. We, Premium Panels, want to understand where, why, when, and by whom our products will be used. We are interested in the idea behind your project, this in order to assure that there will be a match with the idea behind the product.

Convince yourselves, and check our collections on our website: www.premium-panels.com.

Premium Panels, your service

Throughout Europe we work with a network of product specialists: Your Premium Panels commercial representative or agent. Please do not hesitate to get in touch with your personal contact through our headquarters, based in The Netherlands.

Your Premium Panels team.

STACK PANEL

Stylish and sustainable 3D-timber solutions

The power of aesthetics on soul, mind, health & behaviour of people can not be under estimated. Stack Panel combines beauty, performance and endurance in order to transform any internal space by adding warmth, texture, colour, design and architectural flair.

Stack Panel is a 3-dimensional wallcovering, produced from Greentag Certified Western Red Cedar. The idea of Stack Panel is to create elegance and style through the use of beautifully recycled timbers composed in random patterns. The Stack Panel product is made of recycled offcuts and wastage of Western Red Cedar (from East-Coast Canada) that would otherwise be burned or used as landfill.

Stack Panel has been specified and installed in a large number of commercial, hospitality, retail and residential applications. To these projects Stack Panel has brought artistic style, credible sustainability and multidimensional appeal. The result was innovative, contemporary and highly textured, provoking a great deal of admiration.

KEY APPLICATIONS

- Hotels & resorts
- Restaurants
- Cafes
- Kitchens
- Auditorium acoustic linings
- Board rooms
- Shop fit outs
- Stair wells
- Commercial fit outs
- Hospitals
- Elderly homes
